

Aromatherapy Infuser System

The Aromatherapy Infuser System is available on all Designer Collection Whirlpool baths. The bather can open the Infuser Cap, located on the top deck of the bath, and add aroma beads or essential oils applied to a wick. As the whirlpool jets start to deliver therapeutic benefits, the aroma of their choice starts to permeate the bathing experience.

ADVANTAGES

The advantages of the Jason Aromatherapy Infusion System are two-fold. Using the Infusion System for aromatherapy reduces the potential hazard of a slick acrylic surface from exposure to essential oils. In addition, the infuser provides the desired fragrance while minimizing the necessary cleaning required with conventional methods. Unlike other methods, the Jason Aromatherapy Infuser System will not contaminate the bath with oily residue. The aroma is infused into the bath through the venturi action of our water jets. This allows the bather to experience the combined benefits of hydro and aroma therapies together in one vessel.

- 3) Replace the cap. **NOTE:** The cap must be on to ensure proper air flow and aroma infusion through the system.
- 4) Open the air-volume control knobs to allow for maximum air flow. See Figure 1.
- 5) Turn the Whirlpool pump on. The aroma from the essential oils or scented beads will begin to infuse into the bath while the pump is operating.

OPERATION

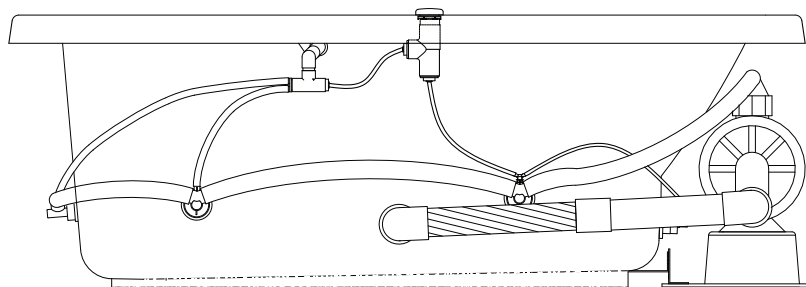

- 1) Locate the Aromatherapy cap on the top deck of the bath. See Figure 1.
- 2) Remove the cap and load the basket with aroma beads or essential oil applied to a wick.

CAUTION: Do not pour essential oil directly into the basket. ALWAYS apply oil to the wick before inserting wick into the Aromatherapy basket.

CLEANING

The Aromatherapy Infuser is made of durable PVC plastic material and can be easily wiped clean with a cloth and mild cleanser. For regular cleaning use Jason Bath Cleaner or a mild NONABRASIVE liquid detergent solution (i.e. glass cleaner) and a soft, wet cloth or sponge. Do not use foaming cleaners or soaps.
